Design the architecture of a 4-bit capacitor DAC. 12.15 A bias generator is required to generate 16 steps from 0 to 100 μ A to bias an amplifier. Design a CMOS DAC to do this, assuming the presence of a 50 μ A reference current. 12.16 Differential circuits provide good noise immunity and have the advantage of dual rail inputs and outputs.

CMOS VLSI Design: A Circuits and Systems Perspective (4th ...
This book conveys an understanding of CMOS technology, circuit design, layout, and system design sufficient to the designer. The book deals with the technology down to the layout level of detail, thereby providing a bridge from a circuit to a form that may be fabricated. The early chapters provide a circuit view of the CMOS IC design, the middle chapters cover a sub-system view of CMOS VLSI, and the final section illustrates these techniques using a real-world case study.
