BeginnersGuide - Python Wiki

• Binding a variable in Python means setting a name to hold a reference to some object. • Assignment creates references, not copies • Names in Python do not have an intrinsic type. Objects have types. • Python determines the type of the reference automatically based on the data object assigned to it.

Introduction to Python - MicroObservatory

Omitting the first and/or last index: Omitting the first index a[:n] starts the slice at the beginning of the list. Omitting the last index a[m:] extends the slice from the first index m to the end of the list. Omitting both indexes a[:] returns a copy of the entire list, but unlike with a string, it's a copy, not a reference to the same object.

Indexing and Slicing – Real Python

The Python interpreter then runs, starting with a couple of lines of blurb. In particular it identifies the specific version of Python it is running. (3.2.3 in this slide.) Then it gives a prompt of its own, three "greater than" characters. The Python 3 program is now running and it is prompting us to give a Python command.
